## **New Biometric Access Control Feature for EntroWatch**

Biometric credential approval is now a standard feature for the EntroWatch v3.0 access control software system when installed with an ievo Ultimate biometric reader.

The ievo Ultimate uses a multispectral imaging sensor with advanced security features to deliver a cutting-edge biometric reader solution. The ievo device can read surface and subdermal fingerprints simultaneously, even when there are hard to distinguish factors including dirt, moisture and skin damage.

Fingerprint scans from an ievo Ultimate reader or ievo Registration Reader are stored in the EntroWatch database alongside traditional credentials and access codes. When presented to the IEVO Ultimate reader, the EntroWatch v3.0 software compares the fingerprint credential to the user record and either grants or denies access. Two factor access credential authorisation can also be activated if required.

Robin Koffler, sales and marketing director at Remsdaq says: “We wanted to integrate the best CPNI certified biometric reader in the market with EntroWatch for our government and high security clients. As well as the outstanding security features, the ievo Ultimate is also IP65 rated for use in harsh environments and will appeal to our overseas business partners as well as our UK security installers.”

EntroWatch v3.0 and ievo Ultimate biometric readers are a perfect solution for sites that want to provide a mixture of fingerprint and card readers/keypads or rely solely on fingerprint credentials. Schools, colleges and universities are typical users as well as sites requiring biometric only secure access including government buildings, prisons and military bases.

"We're delighted to have been part of the process. By integrating EntroWatch v3.0 with the ievo CPNI-approved Ultimate Reader, Remsdaq has been able to enhance their access control system and provide complete peace of mind for clients, while making processes simpler and quicker for staff utilising our biometric readers and software on a day-to-day basis" commented Richard Forsyth, UK & Ireland Sales Manager at ievo.

EntroWatch is part of the Remsdaq Entro series which includes EntroPad card readers and keypads with antimicrobial properties, EntroPad 2-door and EntroNet 8-door controllers for sites up to 3,200 doors.
